Secure File

• 60 minutes document protection

Are you looking to protect hanging files but are restricted by budget? With the Secure File from SecureLine you are assured of quality document protection at a low price. Such a combination represents outstanding value when you consider the wide range of integrated features. Certified for 60 minutes document protection, the cabinet offers quality locking, individual drawer protection and a choice of two sizes. Such product advantages illustrate SecureLine's commitment towards providing "the best value security solutions".

Models

- The 25"deep Secure File, available with two or four drawers, provides highly flexible storage

Certification

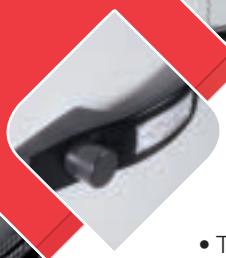
- The Secure File range has been tested and certified by SP to NT Fire 017-60P offering 60 minutes fire protection for documents

Locking

- The cabinets are secured by a single key lock for which two keys are supplied
- In addition, each drawer is fitted with a day catch to keep individual drawers closed

Additional Features

- The cabinets are constructed with a new lightweight material which means they can be placed in areas where floor loading is an issue
- The two-drawer model, for example, is compact enough to fit under a standard office desk
- The total available internal height of each drawer, 291mm, is suitable for all types of file, and even when fully loaded, the cabinet remains incredibly stable
- Thanks to separate barriers of insulation material inside the cabinet, the contents of each drawer are independently protected from fire. This also prevents unauthorised personnel from getting at the contents of a locked drawer via an open drawer
- In addition, the steel-lined inner body protects drawer contents from insulation dust



Design

- The Secure File has a modern silver-grey finish and electrostatic powder-coating for scratch resistance
- Functionally designed handles on each drawer incorporate a labelling system to ensure that stored documents can be easily located
