Fire Protective Safe FP 44 E

Document Safe - protection against
burglary and fire

The new and improved FP 44 E fire protective safe offers many enhancements over the previous generation. Users are now able to create two individual pin codes. Paired with an angled LCD display, ideal for operating from above. It ensures your code is not displayed when entered for additional privacy.

The safe has a robust design with a double-walled door and body that protects it against break-in attempts, as well as providing 60 minutes of fire protection for documents held inside. With an exquisite anthracite body and sleek stainless steel control panel, the FP 44 E is visually very appealing. Opening and closing the fire protective safe has become even easier, with the high quality rotary knob.

- document safe – protection against burglary and fire
- double-walled body and door, all-round fire fold
